Reference : Case # 2005-00380

Dear Ms. O' Donnell,

I have received and reviewed the information from the Louisville Gas and Electric Company as of the history of the billing for this service. The problem is two fold, one is the amount of electric usage that the this meter was recording and the fact that the meter in question was to be sent to an independent testing facility. The first problem is that this service is just a sixty ampere service and the power cords to the boat are two ten gauge wires. I have some electrical background and do not believe that this amount of usage could be carried on this size of wire without some wire or plug damage. Secondly the report that I received stated that the meter was tested within the Louisville Gas & Electric Company facility not an independent testing facility.

As I have said all along how come the usage was only up on the same months each year and it also makes me specious of all of the readings of this meter.

Respectfully,

Richard Dudley Ford
